

Special Characters created using the ASCII Code or Unicode

To insert a Special Character, hold down the ALT key and type ASCII code on only the numeric keypad. To use instead the Unicode, type the Unicode number with **any** number key, and then hold ALT-x.

To enter the desired special character, when using the ASCII code, hold down either ALT key, and while holding the ALT key, type the ASCII code number **on the numeric keypad to the right of the letter keys**, and then release the ALT key. The number keys above the letter keys do not work with the ASCII code!

If no numeric keypad, type the Unicode number **followed** by holding down the ALT key and hitting the x-key. When the ALT key is released, the number is replaced by the desired special character. This works using either the number keys above the letters, or the numeric keypad, but does not work as universally in all applications as the ASCII codes.
